Notes

Want to find out more?

For more information on this topic

- Read our 'Exercise' factsheet.
- Read our 'Nutrition' booklet.

For more information about HIV

- Visit our website www.aidsmap.com.
- Speak to an adviser at THT Direct (phone: 0808 802 1221).

For information in other languages

- Visit www.aidsmap.com/translations.

Has this leaflet been useful to you?

Please let us know what you think. Your feedback helps us to improve the services we offer.

You can contact us to find out more about the scientific research and information we have used to produce this leaflet.

We recommend that you discuss the information in this leaflet with a doctor or other health worker.

A balanced diet and regular exercise will help you reach and maintain a healthy weight.

1 There are usually two reasons why people put on too much weight.

- Eating too much food (especially foods with a lot of sugar or fat).

- Not doing enough physical activity.

2 Modern anti-HIV drugs rarely make people fat.

Anti-HIV

3 People with HIV can usually follow the same healthy eating advice as everyone else. Try to eat a balanced diet.

4 Adults who want to lose weight need 45 to 60 minutes of physical activity every day.

Important points

- Most people need to eat less of the foods which are high in fat or sugar.
- You can incorporate physical activity into your daily life (for example, by walking instead of driving or taking the bus).
- Modern anti-HIV drugs rarely make people fat.
